🧠 Skills

- Languages: JavaScript, TypeScript, Python, C#
- DevOps & Tooling: Docker, GitLab CI/CD, Tauri
- Architecture: Microservices, Saga Orchestration, API Design, System Design
- Frontend: Angular, Tailwind CSS, Flutter
- Observability: Loki, Grafana
- Backend: Django, ASP.NET, Celery, RabbitMQ
- AI / ML: TensorFlow, Keras, Scikit-Learn, NLTK, OpenCV, Ollama
- Database Management: SQL Server, Oracle, PostgreSQL, SQLite
- Design: Figma, UI/UX, Wireframing, Prototyping

📁 Professional Experience

Software Development Specialist, Syriatel Mobile Telecom

01/2023 – present
Damascus, Syria

- Sole architect and developer of **Pay It Forward**: a cross-border bundle activation platform enabling Syrian diaspora to pay via card and activate telecom bundles for recipients inside Syria; built on a microservices architecture (Django · Angular · Celery · RabbitMQ) with Saga orchestration for distributed transaction management, payment gateway integration for card processing, and Loki + Grafana for centralized log monitoring; handled end-to-end system design, implementation, and testing independently.
- Architected and delivered the **Fuel Control Management System (FCMS)** end-to-end as a full-stack developer — an Angular + .NET application integrating with Oracle ERP via SQL Server linked servers and Camunda for multi-stage workflow processing, handling the company's fuel transaction lifecycle across all operational units
- Built and maintained a **Queue Management System** serving all customer service branches, integrated with a Voice Recording System across all service points and sustained zero critical downtime over 2+ years
- Sole frontend developer on the **Bulk Messaging System**, including an auto-rejection text analysis module that filters invalid messages before dispatch
- Established GitLab CI/CD pipelines for both Angular and .NET repositories, standardizing deployment workflows
- Led UI/UX modernization of the FCMS and BMS Angular frontend.

🎓 Education

Bachelor's degree in Information Technology - Artificial intelligence Major,

Arab International University

01/2017 – 07/2022
Damascus, Syria

Graduated with a Bachelor's degree in information technology and majored in artificial intelligence achieving an A+ on both my graduation project and my junior project.

Pursuing MBA alongside full-time engineering work to bridge technical depth with business strategy, with a focus on system design, organizational decision-making, and product thinking.

Projects

Alpha Academy — Flutter · Django | <https://play.google.com/store/apps/details?id=com.alphaacademy963.app>

An e-learning mobile app built for Syrian students. Features separate teacher and student login flows, video upload and streaming, quiz creation, and graded assessment. Built to address the gap in accessible exam prep resources in Syria.

Selene Suite — Tauri · Angular · Django · SQLite | <https://selene-landing-woad.vercel.app/>

A suite of offline-first desktop productivity apps built with Tauri + Angular frontend and Django backend, designed and developed independently end-to-end — including UI/UX, branding, and a dedicated landing page.

- **Lumina** — Kanban task tracker with priority levels, drag-to-reorder, templates, and archive; works fully offline with no accounts or subscriptions
- **Ember** — Pomodoro focus timer with an animated pixel-art flame that reacts to the session; includes focus/break modes and intention-setting
- **Fable** — Private journal and notes app with dated entries, colour-coded tags, streak counter, and a 7-day strip view; all data stays on device

أرتيزان (Artisan) — Django · Angular | <https://artisan-orphin-omega.vercel.app/>

A Syrian handmade goods marketplace connecting local artisans: potters, weavers, soap makers, and more, with buyers. Features artisan profiles, product listings by craft category, and a clean Arabic-first UI. Built with a team; solely responsible for all development to date.

PromptOverflow (Community Project) — Angular · Django | <https://prompt-vault-anku.vercel.app/>

A community platform for publishing, discovering, and sharing AI prompts.

QReate — Django · Angular · Celery · Node.js (Baileys)

An event invitation platform that generates and delivers QR codes to attendees via WhatsApp using a Node.js Baileys microservice. Includes async delivery pipelines, attendee management, and real-time check-in scanning.

TEDx AlQassaa Platform — Nest.js · Django | <https://tedxalqassaa.sy/#/>

Designed and built the first official TEDx AlQassaa website, including a full Django backend for attendee management with custom database architecture, secure authentication, scalable API endpoints, and a QR code scanning/processing module.

PillPal — Flutter · Django · Celery · Redis · Firebase Cloud Messaging

A wellness and habit-tracking mobile app with a no-shame design philosophy. Features a habit anchor system, buddy accountability modes, and push notification delivery via FCM with async task scheduling through Celery and Redis.

Certificates

- Python for data science from IBM. 
- Data Science Methodology from IBM. 
- Data Science Orientation From IBM 
- The Foundations Of User Experience (UX) design - Google. 
- Wireframes and Low Fidelity Prototypes - Google. 
- High-Fidelity Designs and Prototypes in Figma - Google 
- Machine learning with Python from IBM. 
- Tools for Data Science from IBM. 
- Successfully completed the EF Standard English Test, achieving an overall English level of C2 PROFICIENT according to the Common European Framework of Reference 
- UX Design Process - Google. 
- Conduct UX Research and Test Early Concepts - Google 

Languages

English — C2 • Arabic — C2

Publications

Voting-based Multimodal Automatic Deception Detection | <https://arxiv.org/abs/2307.07516> , Available on arXiv

Proposed a voting-based method for automatic deception detection from videos using CNN for images, SVM on Mel spectrograms for audio, and Word2Vec with SVM for text, achieving significant performance improvements over existing methods.

Volunteering

Programming Team Volunteer, TEDx AlQassaa 

04/2025 – Present

Played a key role in developing and designing:

Damascus-Syria

- **The first official TEDx AlQassaa website** (Angular frontend + UI/UX design)
- **Full Django backend system for attendee management** including custom-designed database architecture, scalable API endpoints, secure authentication flows and QR code scanning/processing module.

AI Trainer

03/2024

Volunteered as a trainer at the AI hackathon event, organized by Genius Planet and funded by the UN in partnership with Sanad Org. Conducted training sessions for over 30 students, guiding them through the fundamentals of AI and providing assistance to prepare them for the hackathon.

Damascus, Syria
